Category:Ubisoft gamesQ: Access a view controller from outside a custom class I'm creating a custom class for downloading some parts of a website and I need to be able to access that class from another class. In order to do that I need to access a view controller in that custom class, but I'm unsure how to do it, here's what I have so far:

```
@interface ClientScript : NSObject - (void)downloadImage:(NSString *) imageURL;
@end
@implementation ClientScript - (void) downloadImage:(NSString *) url {
    NSURLRequest * request = [NSURLRequest requestWithURL:[NSURL
URLWithString:url]];
    NSURLConnection * connection = [[NSURLConnection alloc]
initWithRequest:request delegate:self];
    if(connection)
```
