IRender nXt . New version posted - NC95 - February 21, 2013 New release posted - NC94 - January 16, 2013 New release posted - NC93 - December 20, 2012

Free version is enough to see new features and functionalities. Next free version is scheduled for June, due in June I think, with the version after that, I don't know the month.. A: This is not the best post to answer this question since it is from 2014 and is not really related to the question asked, but since it has been there for quite some time and I see it come up in google searches, I wanted to add a useful post here to post the best information I can get. So, in the latest version of iRender (v7.1.5.919) the ray tracing is turned on by default. You may have to turn it off if you have turned it on in the past. I am no expert, but I suspect the problem you are having is that you are using a floating point number in the ray to color. I have had terrible results with using a floating point color, so I usually just tell iRender to stop and use a different color. After turning ray tracing off and turning floating point off you may have to turn it back on. (if ray tracing is turned on). I couldn't tell you why it won't turn on for you though. If it works after doing this and turns off again, you may want to post a new question about that. A: There's an idea, put in. Did you try it? I'm not super sure about the meaning of that, though. Some more info on the forum may help to clarify. For your information, iRender is free both on RenderRush and on SketchupCentral. I just downloaded the newest version to play with it a bit. In the next update, the nXt will have a new WebUI mode with a bit more liberty. Q: How to get current time in android? This is the code what I am using: public class MainActivity extends AppCompatActivity implements View.OnClickListener { private static final int LIGHT_1 = 1; private static final int LIGHT_2 = 2; private static final int LIGHT_3 = 3; private static final int LIGHT_4 = 4; private static final int LIGHT_5 = 5; private static final int LIGHT_6 = 6; ba244e880a
