Mozilla Firefox no Windows 7: não consegue instalar os plugins, o que pode ser? The driver should be under the same driver source module "Module64" Q: How do I remove escaped backslashes from an array? I have the following code (which is simplified for the sake of simplicity): \$words = explode(' ', '\\Hello\\ \\Hello\\World\\'); As you can see there are a bunch of backslashes in the string. I'm trying to write it to an array, but I keep getting the following error message: Parse error: syntax error, unexpected '\\' in /path/file.php on line 11 I'm not sure why it's expecting that extra backslash, and I'm sure it must have to do with the escaped backslash escaping the next one. How can I remove the backslashes from the array? A: It's no surprise that you get a parse error, because your string: \$words = explode(' ', '\\Hello\\ \\Hello\\World\\'); is not valid. The \\ must be escaped, and the \\ can't be escaped, so the whole thing must be escaped, like this: \$words = explode(' ', '\\\\Hello\\ \\Hello\\World\\'); A: You can split the string into individual words, and then use trim to remove the extra characters: \$words = explode(' ', trim('\\Hello\\ \\Hello\\World\\')); Endoscopic dissection of the carotid sheath from the anterior wall of the maxillary sinus. A patient with an anterior maxillary sinus wall tumor who had refused surgery for cosmetic reasons underwent endoscopic dissection of the carotid sheath from the anterior wall of the maxillary sinus. This procedure enabled us to confirm the site of origin of the tumor. Endoscopic dissection of the carotid sheath is an efficient method for revealing the structures of the base of the skull and the paranasal sinuses. This invention relates to a system and method for programming in a controlled environment the surface texture of an automobile headliner. More specifically, this invention relates to a system and method for programming in a controlled environment the surface texture of an automobile headliner. Modern vehicle interior panels comprise soft plastics laminated with a
