Free DownloadQ: Upload images through

UIActivityViewController on iPhone So, I have an app that allows the user to take an image from the Camera Roll and put it in an activity view controller, however, when the image is selected, it's the default image, not the picture that the user took. Is there any way to update the image that is passed to the activity view controller through the UIActivityViewController?

Here is my code: -(void)performActivity {

```
UIImagePickerController *imagePicker =
```

```
[[UIImagePickerController alloc] init]; // Configure
```

```
the picker imagePicker.delegate = self;
```

```
imagePicker.sourceType =
```

```
UIImagePickerControllerSourceTypeCamera;
```

```
imagePicker.mediaTypes = [UIImagePickerController  
availableMediaTypesForSourceType:UIImagePickerController  
SourceTypeCamera];
```

```
imagePicker.allowsEditing = NO; // Show the picker
```

```
[self presentViewController:imagePicker
```

```
animated:YES completion:NULL]; } - (void)imagePic
```

```
kerController:(UIImagePickerController *)picker
```

```
didFinishPickingMediaWithInfo:(NSDictionary *)info
```

```
{ [self dismissViewControllerAnimated:YES
```

```
completion:NULL]; UIImage *image = [info
```

```
valueForKey:UIImagePickerControllerOriginalImage];
```

```
UIImage *image1 = [[UIImage alloc]
```

```
initWithData:UIImageJPEGRepresentation(image,
```

```
1.0)]; NSString *mediaType = [info
```

```
valueForKey:UIImagePickerControllerMediaType]; if
([mediaType isEqualToString:@"public.image"]) {
//put image in the savedToPhotos = folder NSData
*imageData = UIImageJPEGRepresentation(image1,
1); [[NSFileManager defaultManager]
removeItemAtPath:savedToPhotosPath error:nil];
[[NSFileManager defaultManager]
createDirectoryAtPath:savedToPhotosPath
2d92ce491b
```
